CAREER OBJECTIVE

Motivated and detail-oriented Computer Science graduate seeking an entry-level software development role. I have a solid understanding of programming fundamentals, strong analytical and problem-solving skills, and the ability to learn new technologies quickly. My technical skills include Java, Spring Boot basics, HTML, CSS, JavaScript, and RESTful APIs, along with knowledge of Data Structures, Algorithms, OOP, and basic cybersecurity tools such as XSS testing, VAPT, Burp Suite, and SQL Map. I also have good communication skills, basic SDLC knowledge, and experience working both independently and collaboratively. Known for professionalism, accountability, and a positive attitude, with academic project experience that strengthens my practical understanding. I aim to contribute to secure, efficient, and user-focused application development while growing as a developer.

EDUCATION

Anurag Engineering College

2021 - 2025

B Tech in Computer Science and Engineering

CGPA: 7.41/10

TECHNICAL SKILLS

- **Programming Skills:** Proficient in Java, Basic Knowledge on Spring Boot.
- **Common skills:** MS Excel, Word, and PowerPoint
- **Web Technologies:** HTML5, CSS3, Restful Apis, JavaScript .
- **Competencies:** Data Structures & Algorithms, Problem-Solving, Logical Thinking and Object-Oriented Programming (OOP).
- **Database:** MYSQL,
- **Tools:** Vscode, Eclipse, Git, Git-Hub
- **Cybersecurity Fundamentals:** Burp Suite, SQL Map, Cross-Site Scripting (XSS) Testing, Vulnerability Assessment & Penetration Testing (VAPT) and Security Reporting & Documentation.

PROJECTS

Garbage Classification System Using Deep Learning Technique

- Developed an automated waste sorting system using deep learning to classify waste into multiple categories (organic, recyclable, hazardous, etc.) with 82% classification accuracy.
- Implemented VGG16 CNN architecture for deep feature extraction, fine-tuned with transfer learning on a custom-labelled garbage dataset of 25,000+ images.
- Applied data augmentation techniques to improve generalization and reduce overfitting by 18%.
- Optimized model training using TensorFlow and Keras, reducing inference time by 35% for real-time sorting.
- Designed a preprocessing pipeline (OpenCV) for image resizing, normalization, and noise reduction.
- Evaluated model performance using precision, recall, F1-score, and confusion matrix analysis.
- Integrated model into a prototype web interface for easy upload and classification of waste images.
- **Tools & Tech:** Python, TensorFlow, Keras, OpenCV, NumPy, Pandas, Matplotlib, Jupyter Notebook.

EXPERIENCE

Cybersecurity Intern, Embrizon Technologies (May–June 2024)

- Conducted comprehensive vulnerability assessment and penetration testing on a deliberately vulnerable web application (testphp.vulnweb.com) to identify security flaws such as SQL injection, cross-site scripting, and configuration weaknesses.
- Utilized industry-standard tools like SQL Map and Burp Suite to automate detection and exploitation of vulnerabilities, analyse security posture, and recommend best practices for mitigation.
- Successfully demonstrated the importance of robust security measures, continuous monitoring, and secure coding practices to enhance web application security.

SOFT SKILLS

- Problem-Solving
- Analytical & Research Skills
- Adaptability & Quick Learning
- Team Collaboration
